Spry Gems™ Xylitol Mints

Spry Gems’ unique formula includes only the highest quality, pharmaceutical-grade xylitol, natural flavorings, and a readily assimilable form of calcium to create a pH-balanced formula that helps preserve the health of your teeth, gums and other oral tissues.

Xlear developed Spry Gems with a number of new and improved flavor profiles to create an even tastier option for the sugar-conscious consumer. Available in four fantastic flavors—Peppermint, Berry, Spearmint, and Cinnamon—Spry Gems are made in Xlear’s state-of-the-art manufacturing facility in American Fork, Utah.

**WHY XYLITOL?**

Unlike most synthetic sugar substitutes, xylitol is a naturally occurring sweetener found in the fibrous parts of plants. Not a new sweetener; it’s been in use extensively since World War II. Its long history of safe usage by people of all ages is supported by hundreds of clinical studies. Xylitol offers a naturally sweet flavor with no aftertaste, and it has a low Glycemic Index (GI) of only 7 (compared to table sugar’s GI of 85 or higher!), making it an excellent choice for anyone looking to manage overall sugar consumption.
Protect your teeth and gums with Spry Gems, the tastiest xylitol-based candy on the market today!

Xylitol also has an amazing effect on oral health. Since most bacteria cannot metabolize xylitol, they are unable to produce the acids and biofilm that they make in the presence of other sugars. Recent research suggests that xylitol may also play an important role in the remineralization of tooth enamel!

**INGREDIENTS**

**Berry Spry Gems**
Xylitol, natural berry flavoring, beet root powder, calcium glycerophosphate, magnesium stearate, stearic acid

**Cinnamon Spry Gems**
Xylitol, natural cinnamon flavoring, calcium glycerophosphate, magnesium stearate, stearic acid

**Peppermint Spry Gems**
Xylitol, natural peppermint flavoring, calcium glycerophosphate, magnesium stearate, stearic acid
